## Product information

ExcelTaq™ series

### 5X PCR Master Dye Mix

**TP1200**

**200 RXN**

5X PCR Master Dye Mix

1 ml × 2

## Storage

4°C for 6 months

-20°C for 24 months

**Caution: Avoid Multiple Freeze/Thaw Cycles**

## Description

The ExcelTaq™ 5X PCR Master Dye Mix is a ready-to-use mixture for amplifying targeted DNA fragments. It is designed to serve as ready-to-use master mix for virtually all PCR applications. The mixture contains all components for PCR with the exception of template and primers. This not only saves valuable time in the laboratory, but also reduces the number of pipetting and reagent handling errors. The PCR Master Dye Mix is supplied as a 5X concentrated ready-to-use mix, that is a mixture of recombinant *Taq* DNA polymerase, reaction buffer, MgCl<sub>2</sub>, dNTP, enzyme stabilizer and PCR-friendly loading dye solution containing tracking dye (Bromophenol blue) enabling efficient amplification of template in PCR and allows the user to prepare a PCR reagent – loading dye master mix conveniently.

## Features

- 5'→3' DNA polymerase activity
- No detectable 3'→5' exonuclease (proofreading) activity
- Generates PCR products with 3'-dA overhangs
- High yield PCR
- High reproducibility
- Reduced pipetting errors
- Includes tracking dye for direct loading after PCR

## Applications

- Routine PCR
- Colony PCR
- High throughput PCR
- Amplification of DNA fragments up to 8 kb
- Generation of PCR products for TA cloning
- DNA labeling
- DNA sequencing

## Recommended PCR Condition

Template	1 – 150 ng
Forward primer	0.1 – 0.5 $\mu$ M
Reverse primer	0.1 – 0.5 $\mu$ M
5X PCR Master Dye Mix	10 $\mu$ l
ddH <sub>2</sub> O	to 50 $\mu$ l
<hr/>	
Total volume	50 $\mu$ l

## Recommended PCR Program

94°C	2 min	} 25 ~ 40 cycles
94°C	30 sec	
50~68°C*	30 sec	
72°C	30 sec/kb	
72°C	1 min	

\*Optimal PCR condition varies according to primers' thermodynamic properties.

## **Quality Control**

### **Functional Testing**

ExcelTaq™ 5X PCR Master Dye Mix is tested for performance in the polymerase chain reaction (PCR) in a 50 µl standard reaction condition to amplify a 665 bp gene from 10 pg of tested plasmid DNA. The resulting PCR product is visualized as a single band on an ethidium bromide-stained agarose gel.

### **Nuclease Assay**

No contaminating endonuclease or exonuclease activity was detected using pUC19 incubated with ExcelTaq™ 5X PCR Master Dye Mix (1:5 dilution) for 4 hours at 37°C.

### **Residual Nucleotides Assay**

No contaminating residual nucleotides were detected from ExcelTaq™ 5X PCR Master Dye Mix by PCR assay.
